

As a subscriber to XM Satellite Radio, I most strongly object to the petition (04-160) filed by the NAB to prevent XM Radio from broadcasting local traffic/weather information. As I travel around the midwest it is great to have a definite spot "on the dial" where I can obtain concise traffic and weather information for my drive area without having to hunt for it. I am PAYING for this service and XM is not offering it for free.

What's next? The NAB going to get upset because I won't listen to Classical music or Rock on THEIR stations because I get better reception and NO commercials on a service I pay to receive?
